Blackwish three reference ratification addendum

Approval recorded 23 October 2026 UTC

Ratified within the stated educational and text-only limits. At 01:29:43 UTC on 23 October 2026, the user stated: "The approved measures are ratified". This record applies only to the presented measures in the three completed references below, not to later additions or a wider implementation.

Covered references

1. Blackwish Protocol Nutrition Diet and Portion Methodology
18 pages, version 1, dated 23 October 2026. Educational nutrient distinctions, illustrative calculations and the reusable portion-accounting method; not a personal diet, supplement regimen or clinical intervention.

2. Blackwish Protocol Sector Logistics Research Reference
22 pages, dated 23 October 2026. Text-only workflow comparisons, separate event-state reasoning, fictional exercises and bounded evidence methods; not authority to operate a business or certify compliance.

3. Blackwish Protocol Mail Internet and Related Delivery Services
20 pages, dated 23 October 2026. Educational delivery-chain analysis, receipt and authentication limits, synthetic examples and the reusable delivery-evidence record; not authority for a shipment, communication, account action or network change.

Limits preserved

All original source, applicability, uncertainty and safety qualifications remain in force. This ratification authorizes no experiments on people, personal dietary intervention or clinical care; no business, mail, account or network operations; no purchases or external communications; and no app changes, deployment or canonical Blackwish synchronization. Future additions are not ratified by this record.

Separate prototype gate unchanged

The earlier prototype design and isolated-test authorization remains separate. Its browser verification gate is **OPEN and environment-blocked**. Unrun browser checks are not passes. This reference approval supplies no new app or deployment authorization.

Additive record and retained evidence

The three original PDFs are preserved unchanged. Their earlier unratified labels remain historical; this addendum records the later, bounded approval without replacing their text. Their prior three-lens Zen and bounded Death Knell reviews remain scoped desk reviews, not empirical validation or universal safety proof. No fresh full-canon audit is claimed.

Approval evidence: the user statement above, following the presented nutrition and sector-logistics approval question and the completed mail and Internet reference delivery. This is a record of ratification, not a new research installment.
