Blackwish Scoped Ratification Addendum

21 October 2026 | Combined addendum v1 | Two separately scoped user decisions

Pigeonholing method and reference at 23 51 UTC

The user answered “Yes” to ratifying the bounded review-record method and the report’s distinctions. The adopted scope keeps claims, evidence, exact versions, scope, authority, counterexamples and reopening conditions traceable; distinguishes classification, repetition, procedural admission, formal adoption, legal authority and empirical truth; and permits proportionate reuse of valid prior review with scope and material-change checks. Jurisdiction, date and retrieval limitations remain.

Corrected capability framework and atlas at 23 52 UTC

The user then stated: “The measures put forward are ratified. Show me the semantic crossroads”. This records adoption of the corrected capability-network framework and atlas as a qualified reference. Knowledge, production, access, maintenance, evidence and authority remain distinct. Historical, cultural, taxonomic and gameplay links retain different types. Fictional labels, regional evidence limits and conditional dependencies remain.

Mandatory dependency corrections

Dependency Correction Addendum v1 governs structured reuse. The raw overstrong husbandry/genomic gates are excluded: pasture coordination is conditional on a pasture or grazing recipe, while breeding-selection and conservation contexts depend on the actual genomic use. Apply the corrected edges or omit them. Remaining prerequisite lists describe the proposed welfare/governance workflow, not universal biological dependencies or historical chronology.

Exclusions and preserved history

The unfinished round 2 interaction programme remains unratified. Neither decision authorizes deployment, live generator changes, canonical synchronization, or farm, animal, human or clinical experiments. There is no legal certification, permission to disregard laws or deadlines, or cultural/genetic hierarchy of worth. Approval does not prove all pages were read, every empirical claim is true, experiments were independently replicated, or the complete historical canon was verified.

The original candidate PDFs and the earlier pigeonholing-only addendum remain unchanged. This combined record adds the later atlas decision without rewriting the earlier scope. Approval binds the versions below, not future revisions.
